APPLICATION FOR PLANT VARIETY PROTECTION

VARIETY - REBEL

Exhibit 13a

Origin and Breeding History of Variety

Rebel originated from a hand pollinated cross of Provider x Harvester. Cross was made in 1964. Selections were made from the F-2 to the F-6 generations for earliness; straightness and firmness of pods to meet requirements for fresh market handling; concentration of pod set; upright structure; high yield; adaptability to mechanical harvesting. Variety was carried through to the F-11 to establish stability.

Pod color variation was a factor in early generations. Also, there was a low frequency of pods with deep creaseback. Variation in plant size was frequent. up to the F-4 generation.

Pure line selections were made in the 6th generation and uniformity was achieved in subsequent generations. However, occasionally a tall plant appeared, but not more than one plant in 1000.

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

APPLICATION FOR PLANT VARIETY PROTECTION

VARIETY - REBEL

Exhibit 13b

Botanical Description of Variety

Rebel is a medium sized, green podded, bush bean with many gross characteristics similar to Sprite, except that plants are more uniform in size and pod maturity is earlier.

Seed coat color is white without vein like under coat pattern. Hilar ring is narrow, faint in outline, and without pigment in the area. In Sprite, the hilar ring is more prominent and with yellow pigment in the area. Seed of Rebel is smaller than Sprite. Rebel averages 25 g./100 seeds as compared to 35 g./100 seeds for Sprite.

Seedling stage is normal for bush beans. Hypocotyl is light green. Flowers are white and borne on short racemes. Average number of flowers per raceme is 4. Pods are medium green and average 13 cm. in length, but may reach 15 cm. under long day length conditions. Cross-section of pods is round with a slight indication of crease-back at times.

Pods are very straight, surface is dull, and pubescence is sparse. In Sprite, pubescence is considerable. Rebel is well adapted to mechanical harvesting as pod set is high, concentrated, and clustering is at a minimum.

Rebel was developed, primarily, for a fresh market type, but is also finding acceptance for canning. It performs well in all regions and seasons, including winter production in Florida.

In Maryland, where extensive acreage is grown, it matures in 53 days. Under winter conditions in Florida, it has matured in 47 days, while in California, 68 days is more typical.

Rebel is a determinate erect bush with a strong structure like Harvester, while Sprite has a thinner and weaker structure as shown by attached photographs.

The number of primary branches of Rebel is usually 5 while in Sprite the number is usually 3.

The length of the first internode above the primary leaf in Rebel is usually longer than in Sprite.

Rebel shows high resistance to rust disease.

Re: Change of Assignment.

Dear Mr. Evans:

This letter is in reference to your correspondence to me, dated July 14, 1987. I wish to make it clear that this change of assignment is to indicate a name change only, from U.F. Genetics, Inc. to Sunseeds Genetics, Inc.

Also, in reference to 'Mystro' tomato, have Item 1 read Sunseeds Genetics, Inc. and issue the certificate to Sunseeds Genetics, Inc.

Enclosed please find a check in the amount of \$170.00 to cover the cost of changing the certificates.
